

HYDROplus®

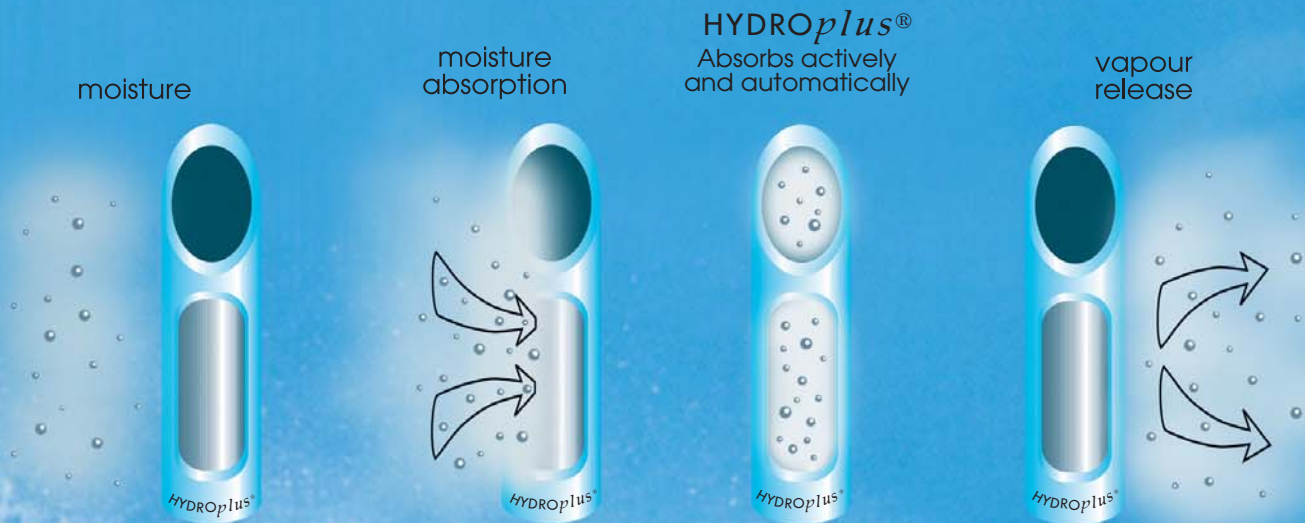

Special Fibre HYDROplus® Achieves Better Moisture Absorption and Release Capabilities Than Have Ever Been Attained Before.

A brand new fiber that transcends currently accepted norms has been created.

HYDROplus® is a revolutionary fiber combining enhanced moisture absorption and release capabilities despite being synthetic. Superior functionality and comfort when worn have been realized by developing not just a special absorbent polymer, but also a structure that covers it with a synthetic fiber.

HYDROplus® is a compound of nylon and an absorbent polymer that promises to change the history of synthetic fabrics.

New Generation of Synthetic Fiber has been Created.

Feel Dry

Main features

1. Outperforms natural fibers with its speed and capacity of moisture absorption and disabsorption.
2. Disabsorption faster than absorption.
3. Provides better-than-cotton absorption through spun-like processing.
4. Remains highly antistatic, even at low humidity.
5. Quickly absorbs and disabsorbs a substantial amount of sweat (vapour and liquid), thus keeping the wearer free from the discomfort of stickiness. It is highly durable, maintaining high absorption and disabsorption performance for prolonged periods.

*HYDROplus® is a high-grade fiber with superior hygroscopic characteristics.
HYDROplus® exhibits superb moisture absorbing and disabsorbing performance.*
