

EVOLUTION

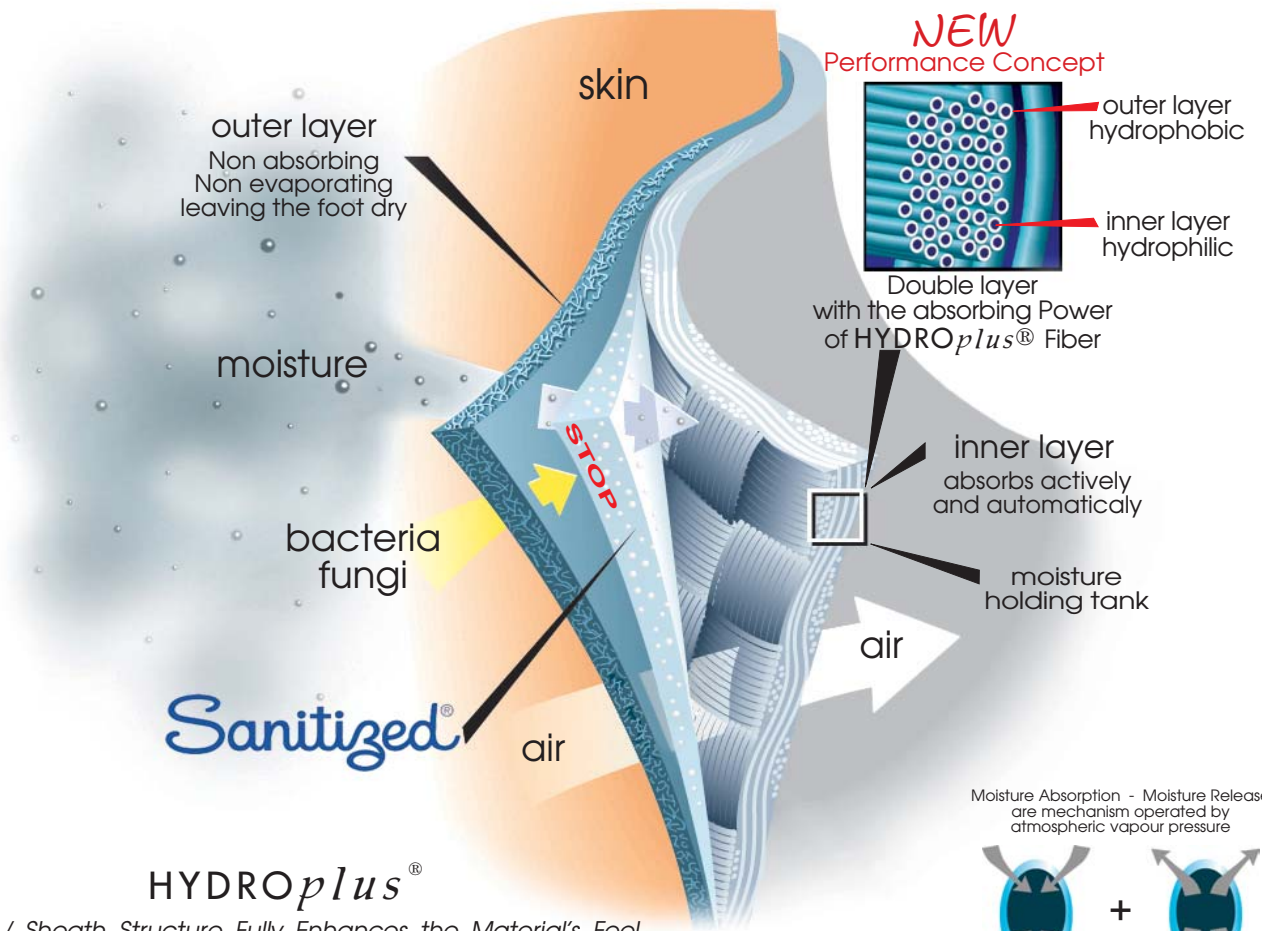

THE NEW GENERATION
DRY BEST[®]

4 - LAYERS PERFORMANCE LINING WITH HYDROplus[®]

4 - Layers Ultra Absorbing Performance Comfort Lining with HYDROplus[®]

Absorption capacity of HYDROplus[®] is 40 times its own weight!

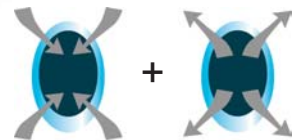

HYDROplus[®]

Core / Sheath Structure Fully Enhances the Material's Feel

The compound structure of the core and its casing, in which a special water-absorbing polymer is covered with a non absorbing, non evaporating porous outer layer, has enabled the controlled absorption and release of moisture. The surface always remains dry, as moisture is absorbed by the polymer at its core.

Moisture Absorption - Moisture Release are mechanism operated by atmospheric vapour pressure

Moisture absorption and release are the result of the different atmospheric vapour pressure between HYDROplus[®] and cloth, or open air
